Divider Style Side Panels for 30U - 48U 10 Series Frames

Based on the size of the frame, choose a side panel kit with provisions for a monitor arm. Each kit contains three panels that fill the opening on the side of a frame. The middle panel (which is installed and secured in place first) has provisions for one articulating arm and a hole with a grommet to route cables.

The top and bottom panels can then be removed from the outside; independent of each other. Formed tabs lock the side panels into place at the bottom while external fasteners near the top secure the panels in place. Articulating arm and fasteners sold separately.

Kit can be retrofit to mount to frames currently in the field.

HS-W1-AD Monitor Arm Features

- Can be used with the majority of monitors in use today
- Supports up to 15 lbs
- Integrated cable management hides cables in the arm
- Removable 180° stop protects walls and panels
- Arm reach: 20"
- Height adjustment range: 10"
- Weight: 5.7 pounds
- Available in black with black trim
- Made primarily of steel and aluminum
- Extension-spring technology used to counterbalance

DON'T SEE IT? CUSTOMIZE IT.

If you don't see what you need, we can likely customize the divider panel to mount a monitor arm of your choice.

Need Something More Flexible?

Check out Emcors track style arm system. Mix and match mounting brackets with different arm/keyboard combinations.
